

1-2-3 TREAT: ARRAY SETUP INSTRUCTIONS

If you have any questions as you complete the tasks, please refer to the Cognitive Assessments section of our FAQs page located at dogagingproject.zendesk.com.

You will need a space that is at least 10 feet by 10 feet. It can be inside or outside, but try to select a space that you think you will be able to use again year after year. The final setup of the space will include a start line where you and your dog will be positioned at the start of each round of the game, and three locations where the boxes you made will be placed.

1. Place a piece of masking tape, a Post-It note, or other mark near the perimeter of your chosen area, leaving enough room for you and your dog to stand comfortably behind it. It should be approximately centered left to right. This will be your start line.
2. Measure 6 feet from the start line toward the center of the area you are working in. Mark this spot, your center location, with a piece of masking tape or a Post-It note.
3. Measure 1.5 feet (18 inches) from the center mark back toward the start line. Then measure 4 feet from this point to the right side. Mark that spot with masking tape or a Post-It note.
4. Again, measure 1.5 feet (18 inches) back from the center mark toward the start line. This time, measure 4 feet from that spot to the left side. Mark that spot with masking tape or a Post-It note.

When you are done, the distance from the start line to each of the other three locations you marked should be 6 feet.

The resulting setup should look like this →
